NATC ISOE Information Sheet No. 2014-15

NATC ISOE Information Sheet No. 2014-15 presents the Canadian reactor annual occupational exposure results for multiple years (2003-2013). The 3-Year Rolling Average Occupational Dose Comparisons provide a means to evaluate site occupational dose performance over multiple years. The data shows the higher outage doses during years of extensive maintenance/refurbishment work at Bruce A 1,2 & Pt. Lepreau performed to achieve future dose reduction due to installation of new plant components.

For this report, annual site doses were used for 2011, 2012 and 2013. Annual site doses were divided by the number of operating units per site. The 3-Year

Rolling Average results for this period are provided in the following table.

Site Name	Three Year Rolling Average Person-Rem (Person-mSv)
Bruce A	207 (2070)
Pickering	105 (1050)
Darlington	66 (660)
Point Lepreau	104 (1040)
Bruce B	118 (1180)
